

[Setting Up PHP For Development On Windows Subsystem For Linux In Windows 10](#)

The screenshot shows a development environment with three main components:

- VS Code Editor:** Displays Go code for a chi router. The code includes package declarations, imports, and functions for creating a new router, mounting sub-routers, and handling HTTP requests.
- Terminal Window:** Shows the output of a 'docker ps' command, listing various containers such as 'iconx\_kibana', 'iconx\_logstash', 'iconx\_elasticsearch', etc., along with their image names, versions, and creation times.
- Database Client:** A window showing a database connection interface with fields for 'Send', 'Save', and 'Cookies Code'.

[Setting Up PHP For Development On Windows Subsystem For Linux In Windows 10](#)
